

# case study

mce Insurance

working in  
partnership with

“With mce expanding so fast, we needed a partner who could support our growth. Having worked with acs previously we were confident they would understand our needs and deliver the best solutions for our business – I am pleased to say that they didn’t disappoint! ”

Adam Parker, mce Insurance

MCE is a leading independent insurance broker serving over 100,000 customers. As one of the UK’s fastest growing insurance providers, MCE expanded into new premises to home its state of the art call centre.

As MCE’s preferred IT partner, acs was asked to advise and quote on the best structured cabling solution for the new offices. Following a full site survey and meeting to establish how the space would be used, acs’s cabling technicians produced an outlet layout plan and schedule of works for 830 data points. With the company growing at a phenomenal rate, specific consideration was given to future expansion. With this in mind, acs recommended an under-floor busbar powertrack system which would make future reconfigurations easier to manage.

In line with the company’s energy efficiency drive, movement operated light systems were also installed. The installation was completed by acs’s trained and accredited engineers and all works were completed in accordance with BS6701, BSEN50174, current IEEE regulations and CCITT standards. Further to this, mce was assigned an acs project manager, ensuring that deadlines were met and potential problems were identified and resolved with minimum disruption. Upon completion of successful FWKE network testing, full documentation was provided including the 25 year warranty.

MCE continues to choose acs as its office partner with further expansion works scheduled, including the implementation of a digital signage solution.
